ERIC MULIMBI (Dean)

Project Sheets (8) – Shareable Summaries (Donor/MDB style)

Kinshasa, DRC | deancin@gmail.com | +243 994 261 675

HOW TO READ THESE SHEETS

- Each sheet summarizes scope, delivery approach, and value added using donor/MDB language.
- Client names are kept at portfolio level unless otherwise cleared; a confidential version can be prepared upon request.

1) USAID – Portfolio Performance Oversight (WASH / Infrastructure)

Apr 2023 – Jul 2025 | DRC (multi-site portfolio) | Role: Project Management Specialist

Scope

- Portfolio-level monitoring and advisory support across multiple implementing partners and construction sites.
- Review of designs, workplans, schedules; QA routines; risk/issue management; performance reporting.
- Coordination with counterparts and partners to remove bottlenecks and maintain compliance.

Value Delivered

- Improved decision speed via structured monitoring routines and management-ready reporting.
- Enabled timely corrective actions through early risk identification and follow-up-to-closure discipline.
- Strengthened implementation discipline through pragmatic QA/QC checks and partner performance reviews.

Approach

- Risk-based monitoring (risk registers, issue logs, escalation triggers).
- Weekly governance cadence; evidence-driven decision memos.
- Digital tracking tools for progress, quality findings, and action follow-up.

Key Deliverables

- Portfolio dashboards and progress summaries.
- Technical review notes (BoQs/specs, implementation plans).
- Risk/issue registers and corrective action trackers.

Tags: portfolio oversight; governance; QA/QC; risk management; donor reporting

2) Urban Water Supply – DRC & Niger (Delivery Support and Service Outcomes)

2010–2022 | North/South Kivu, Ituri (DRC) | Maradi/Zinder (Niger) | Roles: delivery/performance

Scope

- Supported preparation and delivery of urban water investments and operational performance improvements.
- Construction readiness (drawings/specs/BoQs), supervision support, monitoring routines.
- Coordination among utilities, authorities, communities, and implementation partners.

Value Delivered

- Improved access for 200,000+ residents and contributed to measurable reduction in waterborne disease (~25%) in target area.
- Improved delivery predictability through stronger site selection logic and implementation controls.
- Strengthened accountability through evidence triangulation (field verification + partner data).

Approach

- Multi-criteria site selection and field verification.
- Quality/progress assurance routines; corrective actions for deviations.
- Stakeholder alignment meetings with action logs and follow-up.

Key Deliverables

- Technical master plans (urban water) for 3 cities in Eastern DRC.
- Construction readiness packages and workplans.
- Monitoring tools and reporting inputs; options and recommendations.

Tags: urban water; supervision; service KPIs; stakeholder alignment; results

3) World Bank – PSP Options Assessment (Infrastructure services)

Jan 2020 – Apr 2023 | North Kivu, DRC | Role: Consultant

Scope

- Structured evidence to assess PSP options and constraints across water, energy, transport and digital services.
- Stakeholder interviews and field data collection (national and provincial).
- Synthesis of institutional, technical, and financial constraints into decision-ready inputs.

Value Delivered

- Informed service delivery models and enabling conditions for PSP.
- Generated roadmap for deeper due diligence and investment readiness steps.
- Improved clarity on institutional constraints and mitigation pathways.

Approach

- Key informant interviews and triangulation across institutions and operators.
- Option screening against governance, performance, and affordability constraints.
- Decision-note synthesis for senior stakeholders.

Key Deliverables

- PSP options and constraints mapping.
- Stakeholder maps and evidence summaries.
- Investment readiness roadmap and next steps (AGREE).

Tags: PSP; enabling environment; diagnostics; decision notes

4) OPEN sarl – Bankability & Investment Readiness (Water / Sanitation / Water Resources)

Nov 2025 – Present | Kinshasa, DRC | Role: Principal / Bankability Lead

Scope

- Translate technical concepts into financeable structures and decision-ready investment cases.
- Build/review financial models (CAPEX/OPEX, affordability, cost recovery, scenarios/sensitivities).
- Conduct bankability diagnostics and propose mitigation and structuring pathways.

Value Delivered

- Strengthened deal readiness through option comparisons, risk allocation logic, and structured stakeholder engagement.
- Improved realism of delivery assumptions through downside stress-testing and lifecycle cost realism.
- Enabled alignment on feasible service delivery models through evidence-driven workshops.

Approach

- Scenario and sensitivity analysis; affordability and cost-recovery logic.
- Risk allocation framing aligned to PSP/PPP and performance-based elements.
- Workshop facilitation with concise concept notes and action capture.

Key Deliverables

- Bankability notes and investment case inputs.
- Financial models and sensitivity dashboards.
- Option comparisons, risk registers, structuring pathways.

Tags: bankability; financial modeling; PPP/PSP; investment cases

5) FSM Diagnostics – City-level options and readiness

2019–2022 | Bukavu and other urban settings, DRC | Role: Independent consultant

Scope

- Diagnosed FSM constraints across technical, operational, institutional and financial dimensions.
- Mapped stakeholders, roles, incentives; identified priority actions.
- Prepared practical options to support decision-making and program design.

Value Delivered

- Delivered actionable options and sequencing to improve FSM performance and investment readiness.
- Clarified governance and coordination gaps limiting service delivery outcomes.
- Supported municipal/program partners with evidence to structure next steps.

Approach

- Field observation + stakeholder interviews; triangulation with existing studies.
- Option screening against affordability, O&M realism, and institutional capacity.
- Decision-ready synthesis (what/why/risks/recommended actions).

Key Deliverables

- FSM diagnostic note and options analysis.
- Stakeholder mapping and risk matrix.
- Implementation-oriented recommendations – municipal FSM strategic plan.

Tags: sanitation; FSM; municipal services; readiness

6) UNOPS – Rehabilitation Works in Post-Conflict Settings

2007–2009 | Goma & Walikale, DRC | Role: Rehabilitation Expert Engineer

Scope

- Managed field coordination and technical oversight for rehabilitation of health facilities and basic infrastructure.
- Prepared designs/specifications and supported works supervision in constrained operating environments.
- Coordinated with local authorities and civil society to maintain delivery continuity.

Value Delivered

- Delivered rehabilitation outputs under security and access constraints through disciplined planning and stakeholder coordination.
- Maintained quality standards through pragmatic supervision arrangements and documentation discipline.
- Strengthened collaboration and acceptance through clear communication and regular progress reviews.

Approach

- Structured supervision plans; work sequencing and progress verification.
- Quality checks against specifications; documentation for approvals and payments.
- Stakeholder coordination for access and acceptance.

Key Deliverables

- Design/specification packages and site documentation.
- Progress and supervision reports.
- Handover documentation inputs.

Tags: post-conflict; rehabilitation; supervision; coordination

7) Utility Performance Improvement – Provider diagnostics and KPIs (USAID LIFT / Tetra Tech)

2021–2022 | Goma, DRC | Role: Performance Manager (Consultant)

Scope

- Assessed service provider performance (costs, KPIs, operational constraints) to inform investment trade-offs.
- Supported procurement routines and QA/QC controls for works.
- Coordinated experts and supported stakeholder alignment for implementation continuity.

Value Delivered

- Strengthened evidence base for investment prioritization and performance improvement actions.
- Improved delivery predictability through structured QA/QC and milestone tracking.
- Enabled clearer accountability through improved reporting routines.

Approach

- Data collection and KPI analysis; operational constraint mapping.
- Risk-based follow-up on milestones and deliverables.
- Coordination workshops to align on actions and responsibilities.

Key Deliverables

- Provider diagnostic inputs and KPI dashboards.
- Procurement/QA/QC support notes.
- Implementation tracking and reporting inputs.

Tags: utility performance; KPIs; delivery discipline; dashboards

8) Technical Master Planning – Urban Water & Sanitation (Mercy Corps)

2010–2017 | Eastern DRC | Role: Infrastructure Delivery Manager

Scope

- Led engineering teams developing technical master plans for citywide water and sanitation systems.
- Designed and supported delivery of autonomous water systems serving low-income urban areas.
- Managed construction readiness and supervision support; ensured donor-compliant reporting.

Value Delivered

- Created decision-ready planning basis for investment programming and staged implementation.
- Improved service outcomes through system design tailored to operational reality.
- Strengthened program management through monitoring tools and disciplined reporting.

Approach

- Demand and service area assessment; design options and cost realism.
- Implementation sequencing and supervision routines.
- Monitoring tools and management controls for delivery.

Key Deliverables

- Technical master plans and investment sequencing inputs.
- Design packages and workplans.
- Monitoring tools and donor reporting inputs.
