US–DRC Strategic Partnership Delivery Support

Kinshasa, Democratic Republic of the Congo | Advisory + Delivery Support | EN/FR

Executive Summary

OPEN sarl supports governments, development partners, and private investors to translate the US–DRC Strategic Partnership into implementable, bankable, and compliant projects—particularly across critical minerals, energy, transport corridors, and enabling governance reforms.

We operate at the intersection of investment readiness, stakeholder coordination, and delivery execution. Our role is to bridge U.S. standards and requirements with DRC operational realities, ensuring commitments turn into measurable outcomes.

Core promise: decision-ready outputs + locally executable implementation pathways.

What We Deliver

A) SAR/QSP Eligibility & Investment-Readiness Support
• Eligibility screening and compliance checklists (SAR/QSP criteria, ownership/control logic, offtake alignment, corridor feasibility)
• Investment-readiness dossiers (risk register, permitting map, governance plan, financing pathway)
• Bidder packs and due diligence coordination (technical, institutional, ESG, stakeholder)

B) Corridor & Infrastructure Integration (Sakania–Lobito and beyond)
• Mine-to-corridor readiness assessments (capacity, interfaces, costs, bottlenecks, safety)
• Performance and open-access KPIs aligned with corridor competitiveness objectives
• Phased investment plans and coordination support (rail interface, industrial nodes, utilities)

C) Governance & Reform Delivery Support (Implementation, not just policy)
• Process mapping + SOPs for guichet unique, permitting, tax/VAT workflows, customs interfaces
• Institutional coordination frameworks (roles, escalation protocols, reporting formats)
• Performance dashboards and implementation coaching for delivery units

D) Responsible Sourcing, ASM Formalization & Community Interface
• ASM pilot design (site selection, cooperatives/trading centers, traceability pathways)
• Stakeholder engagement and grievance mechanisms
• Alternative livelihoods program structuring and monitoring frameworks

How We Work

1) Diagnose (2–10 days): rapid fact base; stakeholder map; constraints and decision gates.
2) Structure (2–6 weeks): bankability logic; governance/contracting pathways; eligibility and compliance file.
3) De-risk (ongoing): coordination rhythm, risk register, escalation protocol, and decision-ready reporting.
4) Deliver (project cycle): support procurement readiness, supervision support, and results tracking.

Outputs are designed for real decision-makers: concise, evidence-based, and aligned to donor/DFI and private-sector review standards—delivered in English and French.

Differentiators

• Bridge function (EN/FR + standards-to-reality translation): convert requirements into actionable steps for DRC institutions and field conditions.
• Bankability + delivery discipline: not only what should happen, but how it

will actually happen.
• Stakeholder coordination in complex environments: ministries, SOEs, provinces, private operators, communities, and partners aligned around one delivery plan.
• Decision-ready formats: risk registers, implementation roadmaps, dashboards, investor memos, and donor-style annexes.

Typical Clients & Use Cases

Clients
• U.S. and aligned investors/consortiums (mining, beneficiation, logistics, energy)
• DRC public entities and SOEs
• Development partners, DFIs, MDBs, technical assistance programs

Use cases
• Prepare a SAR/QSP project file for investor and Joint Steering Committee-facing discussions
• Design a corridor-linked investment plan (rail + industrial node + utilities)
• Implement a guichet unique process and dashboard to reduce cycle times and uncertainty
• Structure an ASM formalization pilot with credible governance, traceability, and community outcomes

Engagement Models

• Fixed-scope packages (2–12 weeks) for readiness, structuring, or pilot design
• Retainer support for ongoing stakeholder coordination, risk management, and reporting
• Embedded advisory within delivery units, TA teams, or consortium PMOs

Core services

- SAR/QSP eligibility & investor dossiers
- Investment readiness & bankability support
- Stakeholder mapping & coordination
- Corridor readiness & logistics integration
- Governance reform implementation support
- ASM formalization & responsible sourcing

Sectors

- Critical minerals
- Energy
- Transport & corridors
- Infrastructure integration
- Governance delivery

Operating model

- Fixed-scope packages
- Retainers
- Embedded advisory

Languages

- English
- Français

Location

- Kinshasa, DRC (with field deployment)
